1. System Overview

The Cherubim Security Management System is a comprehensive web-based platform that manages all aspects of security operations across your client sites. Built for professional security companies operating across multiple locations.

The system consists of four portals, each designed for a different type of user:

Portal	Users	Purpose
Admin Portal	Operations managers, directors	Full system control & management
Security Portal	Supervisors, control room	Monitor visitors, scan badges, incidents
Staff Portal	Security guards, ground staff	Clock in/out, patrols, shifts
Visitor Check-in	Building visitors (public)	Self-service QR check-in/out

System Architecture

- Frontend: React application hosted on Vercel (global CDN)
- Backend: Node.js / Express API hosted on Render
- Database: Neon PostgreSQL (serverless, auto-scaling)
- Security: JWT authentication, bcrypt hashing, AES encryption
- Offline Support: Progressive Web App with automatic sync

Portal Access URLs

After deployment, the system is accessible at these URLs (replace "your-domain" with your actual Vercel domain):

- Landing Page: /
- Admin Login: /admin/login
- Security Login: /security/login
- Staff Login: /staff/login
- Visitor Check-in: /checkin/<building-id>

2. Getting Started

First-Time Login

1. Open your browser and navigate to the Admin Login page
2. Enter the administrator credentials provided to you
3. After first login, go to Settings > Change Password immediately

Recommended First Steps

1. Change the admin password (Settings page)
2. Create your buildings / client sites (Buildings page)
3. Print QR codes for each building entrance
4. Create supervisor accounts for site managers
5. Create guard/staff accounts and assign them to buildings
6. Brief your team on how to use the system

IMPORTANT - CHANGE DEFAULT PASSWORD

Always change the default admin password immediately after first login. Use a strong password with at least 8 characters including uppercase, lowercase, numbers, and symbols.

3. Admin Portal

The Admin Portal is the command centre of the entire system. After logging in at `/admin/login`, you will see the dashboard with a sidebar navigation providing access to all management functions.

3.1 Dashboard

The dashboard provides an at-a-glance overview of your operations:

- Total Buildings — Number of active sites under management
- Total Staff — All registered staff members across all sites
- Today's Visitors — Visitors checked in today across all sites
- Active Visitors — Currently inside your buildings right now
- Open Incidents — Unresolved incident reports requiring attention
- Active Patrols — Patrol rounds currently in progress
- Guards on Duty — Staff members currently clocked in

The dashboard also displays visitor trend charts and recent activity feeds to help you monitor operations at a glance.

3.2 Buildings Management

Manage all your client sites from one central location.

Adding a Building

1. Click the "Add Building" button
2. Enter the building name (e.g., "First Mutual Tower")
3. Enter the full street address
4. Click Save
5. The system automatically generates a unique QR code for visitor check-in

Building QR Codes

- Each building receives a unique QR code for visitor check-in
- Download or print the QR code and display it at all entry points
- Recommended locations: reception desk, main entrance, security booth, elevator lobby
- If a QR code is compromised, use "Regenerate QR" to create a new one

3.3 Staff Management

Create and manage user accounts for your entire team.

Creating a New Staff Member

1. Go to Staff in the sidebar menu
2. Click "Add Staff"
3. Fill in: Full Name, Email (must be unique), Password, Phone Number
4. Select Role: Staff, Security, Supervisor, or Owner
5. Assign them to a specific building/site
6. Click Save

User Roles

Role	Description	Access Level
Staff	Security guards on the ground	Clock in/out, patrols, own attendance

Role	Description	Access Level
Security	Guards with scanner access	Staff abilities + scan badges + incidents
Supervisor	Site managers	Security + operations + weapons + reports
Owner	Building owners / clients	Admin-like access, limited to own buildings

Password Management

- Reset any staff password via the key icon next to their name
- Minimum password length is 6 characters
- Users can also change their own password via their Settings page
- Deactivating an account preserves all historical data

3.4 Visitors

View all visitor records across all your sites with powerful filtering:

- Filter by date range to view specific periods
- Filter by status: currently checked in or checked out
- Search by visitor name, phone number, or purpose of visit
- View full details including check-in/out times and visit duration
- Visitor ID numbers are encrypted in the database and decrypted only for authorised users

3.5 Operations Centre

The central hub for managing day-to-day security functions across all sites.

Overview Cards

- Guards on duty — real-time count
- Open incidents — requiring attention
- Incomplete patrols — rounds not yet finished
- Active visitors — currently in buildings

Guard Management

View all guards with their clearance status, assigned sites, and key details. Click any guard to access their full personnel e-file.

Patrol Rounds

Monitor all patrol rounds: in-progress and completed. See which checkpoints were scanned, patrol duration, and overall completion rates.

Incident Reports

Log and track security incidents. Each incident includes:

- Title, detailed description, and category
- Severity level: Low, Medium, High, or Critical
- Status tracking: Open !' Under Review !' Resolved !' Closed
- Resolution notes and complete audit trail

3.6 Guard Files (E-Files)

Maintain comprehensive personnel files for each security guard:

- Employee number and personal information
- Date of birth, residential address, emergency contact

- Clearance status: Not Cleared / Cleared / Suspended
- Profile photograph
- Uploaded documents: ID copies, certifications, contracts, training records

CLEARANCE REQUIREMENT

Guards must have their clearance status set to "Cleared" before they can be issued any weapons. Update clearance in Guard Files before attempting weapon issue.

3.7 Assets

Register physical assets at each site for patrol verification. Assets become patrol checkpoints — guards scan the QR code on each asset during their rounds to prove they physically visited the location.

Adding an Asset

1. Click "Add Asset"
2. Select the building / site
3. Enter asset name (e.g., "Fire Extinguisher — Ground Floor")
4. Enter a unique asset code (e.g., "FE-GF-001")
5. Set category and location description
6. Save — system generates a QR code for the asset
7. Print the QR code and mount it at the asset location

3.8 Vehicles

Track company vehicles across your operations:

- Register vehicles with registration number, make, model, and colour
- Assign drivers to specific vehicles
- Track GPS locations with speed and heading data
- Map view for real-time fleet visibility across all sites

3.9 Weapons Management

Manage the entire weapon lifecycle with a complete audit trail.

Registering a Weapon

1. Click "Add Weapon"
2. Enter the serial number (must be unique in the system)
3. Select weapon type; enter make, model, and caliber
4. Assign to a building / site
5. Save

Issuing a Weapon to a Guard

1. Select the weapon from the inventory list
2. Click "Issue"
3. Select the guard (must have "Cleared" clearance status)
4. Record condition notes on issue
5. Confirm — the transaction is logged with timestamp and issuer name

Returning a Weapon

1. Select the issued weapon
2. Click "Return"

3. Record condition on return
4. Confirm — weapon status returns to "Available"

3.10 Reports

Generate reports and export data to Excel (.xlsx) format:

- Visitor Reports — visitor logs by date range and site
- Attendance Reports — staff attendance with hours worked
- Guard Log Sheets — 30-day attendance analysis per guard
- Login Activity — system access audit log (admin only)
- Patrol Reports — completion rates and guard accountability

3.11 Settings

- Profile — update your display name and phone number
- Change Password — requires your current password for verification

4. Security / Supervisor Portal

Access at: /security/login

The Security Portal is designed for site supervisors and control room operators who need to monitor building access in real-time.

4.1 Dashboard

After logging in, the dashboard displays two main tabs:

Staff Tab

- All staff members currently inside the building
- Staff who have exited today with timestamps
- Entry/exit times and calculated shift durations

Visitors Tab

- All visitors currently checked into the building
- Today's complete visitor log with full details
- Search visitors by name, phone number, or purpose
- Manually check out visitors who forgot to scan out

4.2 Staff QR Scanner

Access via /security/scan or the scanner icon in the sidebar navigation.

How Badge Scanning Works

1. Open the QR Scanner page on your device
2. Point the camera at a staff member's QR badge
3. The system automatically processes the scan
4. If the staff member is NOT inside !' registers ENTRY with timestamp
5. If the staff member IS inside !' registers EXIT with duration calculated
6. Every scan is logged with who performed it and when

4.3 Incident Reporting

Supervisors can create and manage incident reports for their assigned building directly from the Security Portal. New incidents are visible to admins and other supervisors immediately.

5. Staff / Guard Portal

Access at: /staff/login

The Staff Portal is the interface for security guards and ground staff to manage their shifts and complete their assigned tasks.

5.1 Clock In / Out

1. Log in with your email and password
2. The portal shows your current status and a live clock
3. Tap "Clock In" when starting your shift
4. Tap "Clock Out" when ending your shift
5. Your total hours are automatically calculated and recorded

5.2 Attendance History

View your complete attendance records:

- Date of each shift worked
- Exact clock-in and clock-out times
- Total hours worked per shift

5.3 Patrol Rounds

When you are assigned a patrol at your site:

1. Navigate to the Patrol page from the portal
2. Start a new patrol round
3. Walk to each checkpoint (asset) in the building
4. Scan the QR code mounted at each checkpoint
5. The system records: which asset was scanned, the time, and condition
6. After scanning ALL checkpoints, mark the patrol as complete
7. Your supervisor can view your patrol completion status in real-time

PATROL COMPLETION

All checkpoint QR codes must be scanned before a patrol can be marked as complete. Missed checkpoints will be flagged in the accountability reports reviewed by supervisors.

5.4 Staff QR Badge

- Your unique QR badge is visible within the Staff Portal
- Present this QR code to your supervisor for entry/exit scanning
- The QR code is generated automatically when your account is created

6. Visitor Check-in System

How Visitors Check In

1. Visitor arrives at the building entrance
2. They see the printed QR code displayed at the entrance
3. They scan it with their smartphone camera — no app download required
4. A check-in form opens in their mobile browser automatically
5. They fill in: Full Name, Phone Number, ID Number, Purpose of Visit
6. They tap "Check In" and receive a confirmation on screen
7. The visitor immediately appears on the Security Dashboard

How Visitors Check Out

1. When leaving, the visitor scans the same QR code again
2. The system recognises their device automatically via fingerprinting
3. A "Check Out" option is displayed
4. They tap "Check Out" — visit duration is calculated and recorded

Important Notes

- No app download required — works in any smartphone browser
- ID numbers are encrypted at rest using AES encryption
- Device fingerprinting enables automatic recognition for seamless check-out
- If a visitor forgets to check out, security can close the visit manually from the dashboard
- All visits are logged with timestamps, IP addresses, and device info for full auditing

7. User Roles & Permissions

The system enforces role-based access control (RBAC) to ensure each user only sees features and data relevant to their position and assigned site.

Feature	Admin	Owner	Supervisor	Security	Staff
View all buildings	All	Own	Assigned	Assigned	Assigned
Create buildings	Yes	Yes	—	—	—
Create user accounts	Yes	Limited	—	—	—
View visitors	All	Own sites	Own site	Own site	Own site
Dashboard statistics	Yes	Own sites	—	—	—
Operations centre	Yes	Yes	Yes	—	—
Guard e-files	Full	Full	View	—	—
Create incidents	Yes	Yes	Yes	—	—
Manage assets	Yes	Yes	Yes	—	—
Start patrols	Yes	Yes	Yes	Yes	Yes
Manage vehicles	Yes	Yes	View	—	—
Register weapons	Yes	—	—	—	—
Issue / return weapons	Yes	Yes	Yes	—	—
Scan staff QR badges	Yes	Yes	Yes	Yes	—
Clock in / out	—	—	—	—	Yes
Export reports (Excel)	Yes	Yes	Yes	—	—
View login audit logs	Yes	—	—	—	—
Reset user passwords	Yes	—	—	—	—

8. Setting Up a New Site

Follow this step-by-step checklist when onboarding a new client site:

Step 1: Create the Building

1. Log into the Admin Portal
2. Navigate to Buildings > Add Building
3. Enter the building name and full address
4. Save — a unique QR code is generated automatically

Step 2: Print & Install QR Codes

- Download the building QR code from the Buildings page
- Print on durable material (laminated A4 or A3 recommended)
- Install at: main entrance, reception desk, security booth, all visitor entry points

Step 3: Create Staff Accounts

1. Go to Staff Management in the Admin Portal
2. Create a Supervisor account for the site manager
3. Create Security accounts for guards who will operate the QR scanner
4. Create Staff accounts for all guards assigned to the site
5. Ensure every account is assigned to the correct building

Step 4: Register Patrol Checkpoints

- Go to Assets and add each location guards must patrol
- Examples: fire extinguishers, emergency exits, stairwells, parking areas, perimeter gates
- Print asset QR codes and mount them at each physical location

Step 5: Register Vehicles & Weapons (if applicable)

- Add company vehicles assigned to the site and assign drivers
- Register all weapons with serial numbers and details
- Set guard clearance statuses before issuing any weapons

Step 6: Team Briefing

- Train supervisors on the Security Portal (15 minutes)
- Train guards on clocking in/out and completing patrols (10 minutes)
- Brief reception staff on the visitor check-in process
- Distribute login credentials securely (do not share via unencrypted channels)

Step 7: Go-Live Verification

- Test QR code scanning on multiple mobile devices
- Run a complete visitor check-in and check-out cycle
- Test staff clock-in and clock-out
- Verify all data appears correctly on the Admin Dashboard
- Test a patrol round with checkpoint scanning

9. Daily Operations Guide

Morning Routine

1. Site Supervisor logs into the Security Portal
2. Reviews any overnight or pending incidents
3. Checks which guards have clocked in for their shift
4. Verifies the visitor dashboard is operational

During the Day

Action	Performed By	How
Visitor arrives	Visitor	Scans QR code at entrance, fills check-in form
Monitor visitors	Supervisor	Watches the Security Dashboard in real-time
Guard shift start	Guard	Opens Staff Portal, taps "Clock In"
Guard patrol	Guard	Walks route, scans QR at each checkpoint
Staff entry logging	Security	Scans guard's QR badge at the gate
Incident occurs	Supervisor	Logs incident via Operations portal
Weapon issue	Supervisor	Issues weapon via Weapons page, records condition
Visitor leaves	Visitor	Scans QR code again, taps "Check Out"
Guard shift end	Guard	Taps "Clock Out" in Staff Portal
Weapon return	Supervisor	Records return with condition notes

End-of-Day Checklist

- Verify all visitors have been checked out (manually close any remaining)
- Confirm all guards have clocked out
- Ensure all issued weapons have been returned and logged
- Review and update any open incident reports
- Check patrol completion reports for the day

Weekly / Monthly Admin Tasks

- Export attendance and visitor reports to Excel for records
- Review patrol accountability reports (guard completion rates)
- Update guard e-files: clearances, expiring documents, new certifications
- Review and close resolved incidents; analyse trends
- Add new hires and deactivate accounts for departed staff

10. Reporting & Exports

Available Excel Exports

Report	Format	Key Data Included
Visitor Log	Excel (.xlsx)	Name, phone, ID, purpose, site, check-in/out, duration, status
Staff Attendance	Excel (.xlsx)	Staff name, email, site, work date, clock in/out, total hours
Guard Log Sheet	Excel (.xlsx)	Guard name, site, first/last clock-in, days worked (30 days)
Login Activity	Excel (.xlsx)	Name, email, role, login time, IP address, login status

How to Export

1. Go to Reports in the Admin Portal sidebar
2. Select the type of report you need
3. Set your filters: date range, building, status
4. Click the "Export to Excel" button
5. The .xlsx file downloads automatically to your device

Patrol Accountability Reports

The patrol reporting system provides detailed guard performance data:

- Completion rates per guard over any selected date range
- Side-by-side comparison of assigned patrols vs completed patrols
- Individual guard patrol logs with checkpoint timestamps
- Missed patrol reports identifying guards who did not complete their rounds

Dashboard Analytics

- Visitor trend charts showing daily counts over the past 7 days
- Real-time operational statistics across all managed sites
- Activity feeds showing the most recent system events

11. Troubleshooting

Page loads slowly or shows "Cannot connect to server"

- The backend may be sleeping after 15 minutes of inactivity (free hosting tier)
- The first request after sleep takes 30–60 seconds to wake up
- Simply refresh the page and wait for it to load
- For production, consider upgrading to paid hosting for always-on performance

"Invalid credentials" error at login

- Double-check your email and password — both are case-sensitive
- Ask your administrator to reset your password if forgotten
- Verify your account has not been deactivated

Visitor QR code not scanning

- Ensure the printed QR code is clean, well-lit, and undamaged
- Visitors should use their phone's built-in camera app, not a third-party scanner
- Check that the building is still active in the system
- If compromised, regenerate the QR code from the Buildings page

Staff QR badge not scanning

- Increase screen brightness on the phone displaying the badge
- Grant camera permission when the browser prompts for it
- Verify the staff member's account is still active

Cannot issue a weapon to a guard

- The guard must have clearance status set to "Cleared" in their e-file
- Update clearance in Guard Files before attempting to issue

Patrol will not complete

- All registered checkpoint assets must be scanned before completing
- Open the patrol detail view to see which checkpoints remain

Excel export downloads empty

- Check that your date range filters actually include data
- Verify records exist for the selected building and time period

12. Security & Data Protection

How Your Data is Protected

Security Feature	Description
Password Hashing	All passwords hashed with bcrypt — irreversible, even by admins
Data Encryption	Visitor ID numbers encrypted with AES-256 before database storage
HTTPS / TLS	All data transmitted over encrypted HTTPS connections
JWT Tokens	Login sessions expire after 24 hours, requiring re-authentication
Rate Limiting	100 API requests per 15 minutes per IP address (abuse prevention)
IP Logging	Every login attempt logged with IP address and device information
Role-Based Access	Users only see data relevant to their role and assigned building
Full Audit Trail	Weapon transactions, login events, and visit records fully tracked

Security Best Practices

1. Change default passwords immediately after any account is created
2. Use strong passwords — at least 8 characters mixing uppercase, lowercase, numbers, and symbols
3. Never share login credentials — every user must have their own account
4. Deactivate accounts promptly when any staff member leaves the company
5. Review login audit logs regularly for suspicious or failed login activity
6. Keep building QR codes secure — regenerate immediately if compromised
7. Export and back up critical data periodically for disaster recovery

Data Retention

- All visitor records, attendance data, and incident reports are stored indefinitely
- Deactivated user accounts are preserved for historical reporting but cannot log in
- The system does not automatically delete any operational data
- Contact your system administrator for any data deletion or privacy requests
